

CLIENT CASE STUDY

The Beacon Jersey City, New Jersey

The Beacon is one of JSC's 'residential luxury' accounts. The Beacon comprises several Towers in Jersey City that were formerly the Margaret Hague Hospital at Jersey City Medical Center. The Beacon complex, comprising a 14-acre site on Bergen Hill, a crest of the Hudson Palisades, is one of the highest geographical points in Jersey City. Jersey State Controls was proud to be part of the revitalization of this site.

The transformation resulted in a stunning, high-end condominium/apartment complex with incredible amenities including a Business Center, Outdoor Lounge, Fitness Center, Pool, Sauna, Pet Park and Courtyard. The Schneider Electric DDC system monitors the central plant for the water source heat pump systems serving the residential units, the Rooftop Units, Air Handlers, Exhaust Systems and monitors the pool equipment.
